ONEGLOBE

OneGlobe provides innovative engineering, software development, and IT consulting services to US federal government agencies whose missions focus on border security and protecting the homeland. We excel at applying emerging technology to our customers mission requirements, engaging at all levels from strategy through execution. We customize our strategy and approach to fit each customer's operational environment and budget. The solutions we create include cloud architecture, big-data analytics, mission-focused applications, and advanced engineering including machine learning and computer vision. We directly support efforts including communications and information management, threat screening & vetting, and detention & removal operations. OneGlobe devotes resources to build our company culture of continuous learning by training our personnel on the latest techniques, methodologies, processes, and tools to provide the best results to our customers.
