

## Integrated Biometrics Capability Statement

May 2020

*Integrated Biometrics, LLC designs and manufactures FBI-certified fingerprint sensors for law enforcement, military operations, homeland security, border security, national identity, election validation, social services, and a wide range of commercial applications. The company's patented light emitting sensor technology enables lightweight scanners that outperform traditional prism-based devices in size, power consumption, portability, and reliability. Identity management solutions providers, government agencies, and corporations around the world rely on Integrated Biometrics' products to enroll and verify individual identity quickly and accurately, even in remote locations.*

*Integrated Biometrics existing products are easily integrated into hand-held devices or kits for both enrollment and verification at borders. The light weight, work in direct sunlight and low power requirements of our sensors are ideal for mobile border identification activities.*

*R&D interests and capabilities include the development of nano size emitting particles to achieve 1000PPI capability in fingerprinting sensors, along with development of ½ palm size scanners. Additionally, we are interested in developing antimicrobial coatings for our sensors, and developing man-wearable flexible biometric sensors to facilitate every border patrol agent to be capable of providing identity interrogations in the field.*
